Randall S. Johnson
President
US Lamps, Inc.
3600 Velp Avenue, Suite 1
Green Bay, Wisconsin 54313

Dear Mr. Johnson:

Several months ago, the Agricultural Marketing Service's grading service at the American Foods Group production facility on Acme Street asked that we investigate options for lighting sources to help improve the grading process of the meat products. At the same time, the Green Bay Energy Team had been looking at options to improve energy efficiency in various areas of the production facility.

US Lamp provided lighting solutions that achieved both of these goals!

With the solutions your company provided, our lighting is currently providing 200 foot candles, a significant increase from our previous lighting levels, and has increased our color rendition notably. The higher light levels and improved lighting quality has aided the inspectors and our employees' in their jobs.

We are also very pleased with the durability and ease of cleaning the T5HO fixtures, and the fact that the fixtures are relatively inexpensive. The eight foot long fixtures allow the light to spread over a wide area and minimize shadows.

American Foods will continue to look at ways to improve and upgrade its lighting sources in all areas of the company, and intend to work with US Lamp in providing the technical expertise and service.

We appreciate all of the efforts your company put forward in addressing our company's lighting concerns, not only in Green Bay, but also in our Nebraska facility. We appreciate the professional manner in which the projects were handled and look forward to working with US Lamp for all of our lighting issues in the future.

Sincerely,

AMERICAN FOODS GROUP

Buck (Ken) Derouin
Plant Engineer
