US Lamp, Inc.
3600 Velp Avenue
Green Bay, WI 54313

To Whom It May Concern:

I am writing to compliment US Lamp, Inc. on a recent lighting project that was done at our De Pere truss plant. We have finished our installation and are pleased with the results.

Recent research led our company to take a look at some energy and money saving opportunity through our existing and original lighting system. The system was an older, decayed 400-watt metal halide system, due for relamping or replacement fixtures. We chose to switch out the metal halide system and replace with a high-bay fluorescent system. This would save us significantly in annual energy costs and we evaluated several vendors to provide this solution to us.

We decided to go with US Lamp's solution because of their expertise and diligence to make sure this system would perform for our application. We were a little worried that our laser grids would not be seen by expected light level increases, but technical data was presented to explain differences in systems and how each would perform, giving us a comfort level to go ahead with the project.

In the end, we are very pleased with the result US Lamp provided us. Our light levels are improved and we are seeing the electrical savings that drove this project. We are now having US Lamp evaluate another one of our plants for similar results and more savings. I'm happy to recommend US Lamp, Inc. for any lighting solutions that a company may be considering.

Thank you and best regards,

Bud Sutton
